

Executive Summary – Sales Analysis Dashboard (FNP Project)

The **Sales Analysis Dashboard** provides a comprehensive overview of business performance by transforming raw transactional data into actionable insights. The objective of this project is to support data-driven decision-making by analyzing sales trends, customer behavior, and operational efficiency.

Key Business Metrics

The dashboard highlights core performance indicators:

- **Total Orders:** 1000
- **Total Revenue:** 3,520,984
- **Average Delivery Time:** 5.53 days
- **Average Customer Spending:** 3,520.98

These metrics indicate a stable order volume with strong revenue generation and moderate delivery timelines.

Revenue Insights

1. Revenue by Occasion

Sales vary significantly across occasions:

- Highest revenue observed during **Anniversary, Raksha Bandhan, and Holi**
- Lower performance during **Diwali and Valentine's Day**

This suggests that customer demand is highly occasion-driven, with certain events outperforming others.

2. Revenue by Category

- **Soft Toys** generate the highest revenue contribution
- Followed by **Sweets and Colors**
- **Mugs** show the lowest performance

This indicates customer preference leans toward emotional/gift-oriented products rather than utility items.

3. Revenue by Time (Order Hour)

- Peak sales hours occur during **evening and late-night periods**
- Fluctuating pattern suggests no uniform demand throughout the day

This insight can be used to optimize marketing campaigns and delivery logistics.

4. Revenue by Month

- Highest revenue recorded in **February and December**
- Noticeable dips during **April and August**

This reflects **seasonality trends**, likely influenced by events and holidays.

Geographical Insights

- Cities like **Imphal, Dhanbad, and Kavali** show higher order volumes
- Other cities demonstrate moderate but consistent performance

This helps identify high-performing regions for targeted expansion.

Top Products Performance

- Products like **Dharbhanga and Sirsa** (top performers) generate the highest revenue
- Remaining products contribute evenly but at a lower scale

This highlights opportunities for **product promotion and inventory prioritization**.

Operational Insights

- Average delivery time of **5.53 days** indicates scope for logistics improvement
 - Customer spending is relatively high, suggesting a **premium or gifting-oriented market segment**
-

Conclusion

The dashboard successfully identifies:

- High-performing occasions and products
- Seasonal revenue patterns
- Customer purchasing behavior

- Regional sales distribution

These insights can help the business:

- Optimize marketing strategies
- Improve supply chain efficiency
- Focus on high-demand products and regions

Overall, this project demonstrates how data visualization can drive **strategic decision-making and business growth**.
